Dehesa Fuente
YMBRO

Located in the heart of the Cadiz countryside, at the edge of the Natural Park "Los Alcornocales", is **Dehesa Fuente Ymbro**, a complex agricultural and livestock farm where the dream of a family has been brought to life: One of our main goals is to share with the world our **passion, love and devotion that we feel towards this land, exceptional nature and quality pastures** and not to mention the fertility of the soil. The final results are tasted through the excellence of our products.

We are lucky that our key ingredients are at our doorstep, in order to ensure that you have access to **quality, natural and exclusively traditional products**, found nowhere else.

Raw Multifloral HONEY

DESCRIPTION

Our Raw Multifloral Honey is a product made from the nectar of a wide variety of plants that flourish in the Mountains of Cádiz. All our bees live in the Natural Park of Los Alcornocales, the largest cork oak forest in the world. This is where our bees collect honey from a 100% natural environment, giving the honey an authentic color and flavor. We are committed to bringing you the best quality, pure and raw honey straight from the bee-hives, with all the goodness and health benefits given to us by nature itself.

FEATURES

The Multifloral Honey is considered one of the most beneficial types of honey given to the wide range of nectars collected by the bees, providing in this way all their goodness to the Wild Honey we offer you. This honey has a natural antibacterial effect, it is considered anti-inflammatory, digestive and healing. It increases energy and physical strength. It can also be used as a substitute for sugar.

TASTING NOTE

The color of the honey will depend on the blooms, which vary according to each year. When it comes from the eucalyptus it inclines to be dark, whereas, the honey proceeding from thymes and orange blossoms tends to be light amber... In this case, broom, rosemary and thyme plantations are predominant. It has a clearly sweet flavour, nuanced with acidic, bitter or salty notes depending on the flora. The crystallization is fine, due to the contribution of the flowers that bloom during the summer harvest.

INGREDIENTS

It contains 7 vitamins: A, C, E, K, B1, B2 and B6.

FORMATS

250g Glass Jars
Manufactured and packaged by: RGSEAA
No: 23604/CA

ORIGIN -

Spain

PRODUCTION AREA -

*Sierra de Cádiz,
The Natural Park of
"Los Alcornocales"*

HARVEST SEASON -

June - July

NON ALLERGENIC -
